"Un paso atrás, y luego a Flex" CSS y sus avances

- Publicado en 1996, "obsoleto" desde 2018
 - display: block, inline...
 - float
 - Pseudo elementos (:hover, :visited...)
 - font, color, margin, padding, border
 - Unidades (cm, mm, px, em...)

• ...

- Publicado en **1998**, <u>en uso</u>
 - position: relative, absolute...
 - Selectores potentes (*, >, +...)
 - Capas (z-index)
 - @media

- Publicado en **2012**, <u>en uso</u>
 - Agrega (o cambia) funcionalidades a CSS2.3
- Sigue en desarrollo

CSS3 – En progreso

Recomendado usar

Sujetas a cambios y revisiones

- § 2. Cascading Style Sheets (CSS) The Official Definition
- às of 2016, Cascading Style Sheets (CSS) is defined by the following specifications. CSS Level 2, breat revision (including errats) [CSS2]
- This defines the core of CSQ gars of which are overridden by laser specifications. We recommend in particular reading Chapter 2, which introduces some of the basic concepts of CSQ and its design.
- CSS Syntax Level 3 (CSS-SYNTAX-3)
 Replaces CSSSS-1, CSSSS-2, CSSSS-4, and CSSSS-6, defining how CSS is parsed.
- CSS Style Attributes [CSS-STYLE-ATTR]
 Defines how CSS declarations can be embedded in markup attributes.
- Mada Osarias Laval 3 [C SS3-MEDIA OUERIES]
 Replaces CSS0\$7 5 and expands on the syntax for media-specific syles.
- CSS Conditional Rules Level 3 [CSS3-CONDITIONAL]
 Replaces CSSS§7 2, updating the definition of igmedial rules to allow neeting, and introduces '<u>deupports'</u> rules for feature-support gueries.
- CSS Nameapaces [CSS]-NAMESPACE] Inroduces an "finameapace" rule to allow nameapace-prefixed selectors.

- Selectors Level 3 [SCLDCT]
 Replaces CSSS§5 and CSSS§6.4.3, defining an extended range of selectors.
- CSS Cascading and Inheritance Level 3 [CSS-CASCADE-3]
 Replaces C920§1.4.9 and C920§6
- CSSValues and Units Level 3 [CSS-WALUES-3]
 Replaces CSSS§1.4.2.1, CSSS§4.9, and CSSS§4.2.1.-5, defining CSSS property definition syntax and
- expanding its serofunits. Replaces C99094.3.6, C990914.1, and C990916.3, defining an extended range of color values. Also
- introduces the 'opacity' property. CSS Backgrounds and Borders Lavel 3 [CSS3-BACKGROUND]
 Replaces CSSSSES and CSSSSES, providing more control of backgrounds and borders, including
- layered background images, image borders, and drop shadows.
- CSS Image Values and Replaced Content Level 3 [CSS3-MAGCS]

 Provides a new foundation swifting a litting of registered elements (such as images), adds additional controls to their sitting and orientation, and introduces syntax for gradients as images in CSS.
- CSS Force Level 3 [CSS-FONTS-3]
 Replaces CSSS(15 and provides more control over forceholds and feature selection.
- CSS Multi-column Layout Level 1 [CSS3-MULTICOL]
 Introduces multi-column flows to CSS layout
- CSS User Interface Module Level 3 (CSS-UH-2)
 Replaces CSSS§18.1 and CSSS§18.4, defining (cursor), outline), and several new CSS hastness than
- CSG Compositing and Blanding Level 1 [COMPOSITING]
 Defines the compositing and blanding of overlaid comentand introduces features to control their
- CSS Writing Modes, Lavel 3 (CSS-WR/TING-MODES-3)
 Defines CSS suggestfor various international writing modes, such as left-to-right (e.g. Latin or indic),
- righero-left (e.g. Hebrew or árabic), bidirectional (e.g. mixed Lath and árabic) and vertical (e.g. áslan
- CSS Flexible Box Module Level 1 [CSS-FLD/BOX-1] introduces a fexible linear layout model for CSS.
- CSS Custom Properties for Cascading Variables Module Level 1 (CSS-VARNOLES-1) httpduces cascading variables as a new printire value type fratic accepted by all CSS properties, and custom properties for defining them.
- CSSTranaforma Laval 1 (CSS)-TRANSFORMS
- The following modules are widely deployed with <u>rough interoperability</u>, but the details are nortally worked out and they need more testing and bugfking
- CSS Transitions Level 1 (CSS2-TRANSITIONS) and CSS Animations Level 1 (CSS2-ANIMATIONS), regarder with (CSS2-ASIMO-1).

 Define mechanisms for remaindening the computed values of CSS properties over time.
- (SS Grid Layour Module Level 1 [CSS-GRID-1]
 Defines a two-dimensional grid-based layouts yearn, opinited for user interface design, in the grid layout model, the children of a grid container can be got litoned into arbitrary slots in a
- predefined flexible or fixed-size layoutgrid.
- breaking, justification and alignment, white space handling, and textransformation. SSWIIChanga Lavairi [CSS-WILL-CIIANGE-1]
- introduces a performance hintproperty called 'will-change'
- iter Effects Module Level 1 (FILTER-EFFECTS-1)

 Filter effects are a way of processing an elements rendering before his displayed in the
- The following modules have completed design work, and are fairly stable, but have not received much seting and implementation experience yet
- CSS Counter Styles Level 3 [CSS-COUNTER-STYLES-3] Expands the possible values of <u>*counter-syle*</u> and provides an <u>ifficounter-syle</u> syntax for
- customized courser styles. 25 Marking Lavel 1 [CSS-MASKING-1] Replaces CSSS§11.12 and introduces more goverful ways of clipping and masking content.
- SS Shapea Module Level 1 [CSS-SHAPES-1]

 Extends foots to effection-rectingular wrapping shapes

- ageoffy sevremphasis marks and sevrehadove.
- 25 Speech Module Level 1 [C SS3-SPEECH] Replaces C990§6, overhauling the (non-normative) speech rendering chapter
- SS Box Alignment Module Level 3 [CSS-ALIGN-3]
- Consine the Satures of CSS relating to the alignment of boxes within their containers in the various CSS box is your models: block is your, table is your, fax is your, and grid is you. SS Fragmentation Module Level 3 [CSS-BREAK-3]
- SS Containment Module Level 1 [CSS-CONTAIN-1] Describes the 'contain' property, which indicates trathe elements subtree is independent of the restrofthe page. This enables heavy optimizations by user agents when used well.
- CSS Scroll Snap Module Level 1 [CSS-SCROLL-SNAP-1]

 Contains Natures to control ganning and scrolling behavior with "eneg gostions"
- Madis Ouerlas, Lavel 4 (MEDIA OUER ES-1)

 Extends and supersedes (CSSS-NEOUOUER ES), expanding the syntax, deprecating most media types, and introducing new media features.
- SS Cascading and inheritance Level ([CSS-CASCADE-1]

 Extends and supercedes [CSS-CISCADE-3] describing how to collate style rules and assign values to all properties on all elements. By way of cascading and inheritance, values are propagated for all properties on all elements.
- Velhage to incorporate them into a future sinage had

- No hay una publicación asociada
- Funciona igual a CSS**3**, agrega "módulos", modificando funcionalidades existentes

- Recordemos:
 - Todo en HTML son "box" (cajas)
 - Todo en CSS son "box-model" (cajas con estilos)
- Esto es un **box-model** →

```
position –

margin –

border –

padding–

– – 1000 × 100 – – – –

– –
```

- Alinea un elemento (izquierda, o derecha) de su contenedor (padre)
- Sus elementos "hermanos" "fluyen" alrededor del elemento flotante
- Literalmente, "es como si flotara"

CSS1 - clear

- "No quiero tener elementos flotando a mi alrededor 😥"
 - left
 - right
 - both
 - none

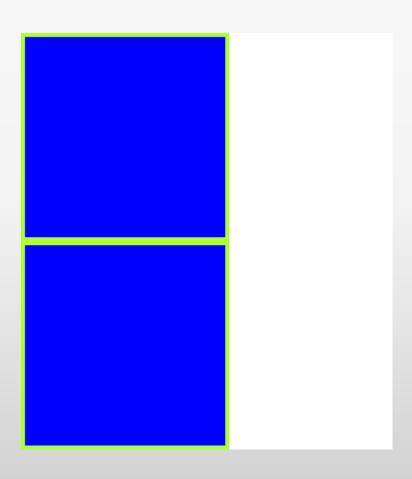

- Por defecto, todo **position** es **static**
- Con absolute:
 - Le decimos a la cajita dónde debe pararse
 - Se la saca del "flujo" del documento (similar a float)

• top, right, bottom, left son los valores a usar

```
<style>
   div {
     background-color: □blue;
     border: 4px solid ■greenyellow;
     width: 200px;
     height: 200px;
 </style>
</head>
<body>
 <div class="caja1"></div>
 <div class="caja2"></div>
</body>
```

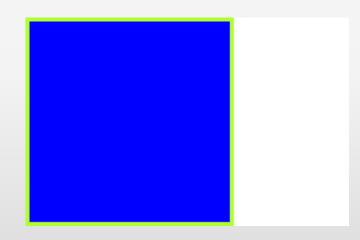

- Por defecto:
 - top: 0
 - right: 0
 - bottom: 0
 - left:0

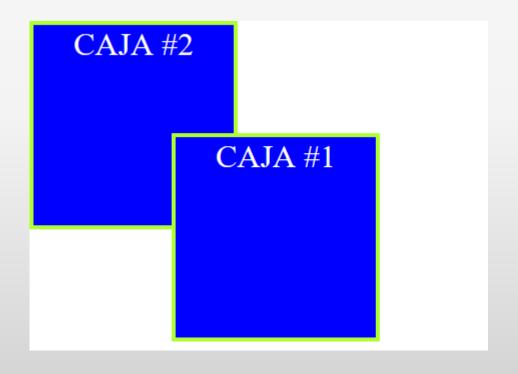

```
.caja1 {
    position: absolute;
}
```

```
.caja1 {
   position: absolute;
   top: 120px;
   left: 150px;
}
```

- ¿Diferencia con float?
 - Podemos decirle a la cajita con más precisión dónde pararse
 - · Las demás cajitas hermanas no saben de nuestra cajita
 - Con float nadie se nos pone encima, en cambio con absolute, si

- Por defecto, todo **position** es **static**
- Con relative:
 - Le decimos a la cajita dónde debe pararse, <u>según su posición</u> original
 - Se la saca del "flujo" del documento (*similar* a float), <u>pero le</u> dejan un espacio vacío (como si estuviese ahí)
- top, right, bottom, left son los valores a usar

```
<body>
-<div class="caja1">CAJA #1</div>
-<div class="caja2">CAJA #2</div>
-<div class="caja3">CAJA #3</div>
</body>
```

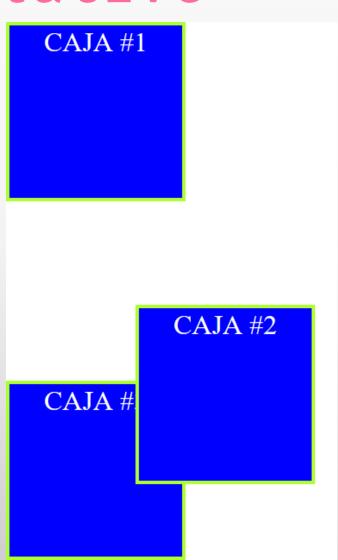

CAJA #1

CAJA #2

CAJA#3

```
.caja2 {
  position: relative;
  top: 120px;
  left: 150px;
}
```

CSS2-position: fixed

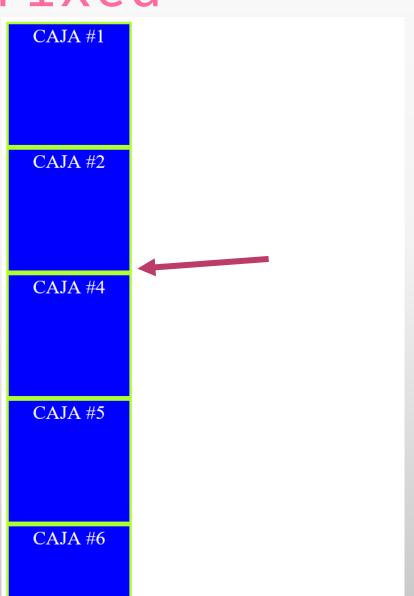

- Por defecto, todo **position** es **static**
- Con fixed:
 - Le decimos a la cajita que "se quede en su posición original, pero que no se mueva de ahí"
 - Se la saca del "flujo" del documento (*similar* a float), <u>pero le</u> dejan un espacio vacío (como si estuviese ahí)
- top, right, bottom, left son opcionales

CSS2-position: fixed

```
<div class="caja1">CAJA #1</div>
<div class="caja2">CAJA #2</div>
<div class="caja3">CAJA #3</div>
<div class="caja4">CAJA #4</div>
<div class="caja5">CAJA #5</div>
<div class="caja6">CAJA #6</div>
<div class="caja6">CAJA #6</div>
<div class="caja7">CAJA #7</div>
<div class="caja8">CAJA #8</div>
<div class="caja8">CAJA #8</div>
<div class="caja9">CAJA #9</div>
<div class="caja9">CAJA #10</div>
</div class="caja10">CAJA #10</div>
</body>
```

```
.caja2 {
    position: fixed;
}
```

CSS3-position: sticky

- Por defecto, todo **position** es **static**
- Con sticky:
 - Le decimos a la cajita que "se quede en su posición original, pero que no se mueva de ahí"
 - A diferencia de fixed, no se la saca del flujo, a menos que "desaparezca" de la visión del usuario (overflow)
- top, right, bottom, left son obligatorios

CSS3-position: sticky

```
.caja2 {
   position: sticky;
   /* Si "desaparece" de la pantalla,
   * le decimos en donde queremos que
   * quede fija.
   */
   top: 0;
}
```

Pista: y la .caja5?

CAJA #2 CAJA #4 CAJA #5 CAJA #6 CAJA #7

CSS4-@media avanzado

```
No funciona en todos lados,
todavía...
                              @media (width ≥ 1200px) {
                                div {
                                --color: □green;
                              @media (width ≥ 400px) and (width < 1200px) {</pre>
                                div {
                               color:  yellow;
                              @media (width < 400px) {</pre>
                                div {
                                  color: ■red;
```
